PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 5+ years of experience architecting, developing, and deploying robust, enterprise-grade applications across the complete SDLC. Deep technical expertise in Java (17+), Spring Boot, Spring Core, and microservices architecture, seamlessly paired with modern front-end delivery using React, Node.js, and JavaScript/TypeScript. Adept at optimizing JVM performance, designing high-throughput RESTful APIs, and managing scalable cloud workflows on AWS. Proven track record of enhancing system reliability through advanced observability, accelerating feature delivery timelines, and mentoring engineering teams to drive technical excellence.

TECHNICAL SKILLS

Languages: Java 17+, Kotlin, Python, JavaScript/TypeScript, SQL, Shell/Bash

Full-Stack & Frameworks: Spring Boot, Spring Core, REST APIs, Node.js, React, FastAPI, Flask, JWT, OpenAPI/Swagger

Back-End Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST/GraphQL APIs, Microservices Architecture

Kotlin / Mobile: Kotlin Multiplatform (KMP), Android SDK, Coroutines, Jetpack Compose, Ktor

Front-End & UI: React, Redux/Context API, Next.js, Node.js, Bootstrap, Tailwind CSS

AI / ML: LLM API Integration (OpenAI, Anthropic), Retrieval-Augmented Generation (RAG), Scikit-learn, Pandas, ML Model Serving, Intelligent Automation, Prompt Engineering

SDLC & Practices: Agile/Scrum, TDD, Code Reviews, CI/CD, SonarQube, Performance Optimization, Secure Coding, Technical Documentation

Databases & Caching: PostgreSQL, MySQL, SQL Server, MongoDB, Redis

Cloud & DevOps: AWS (EC2, S3, RDS, IAM, Lambda), Azure Fundamentals, Docker, Jenkins, GitHub Actions, Terraform, Maven.

Observability: Splunk, ELK Stack, Datadog, Prometheus, Grafana, Incident Response, RCA

PROFESSIONAL EXPERIENCE Software Engineer - Full-Stack & AI/ML - Securian Financial

Jun 2024 – Present

- Led end-to-end SDLC for client-facing insurance and financial applications — owning design, development, testing, deployment, and post-release support, compressing feature delivery timelines by 25%.
- Architected Java 17 / Spring Boot microservices with React front-end interfaces, delivering performant fullstack features for high-traffic client portals serving 100K+ daily users.
- Integrated AI/ML-driven features including LLM-powered document summarization and intelligent formautofill, reducing manual client processing time by 35%.
- Designed and delivered RESTful APIs with OpenAPI/Swagger contracts consumed by web and Kotlin-based mobile clients, improving API response times by 30%.

- Resolved complex multi-threaded production incidents in Linux/Unix environments by applying systematic root-cause analysis (RCA), reducing recurring incidents by 40%.
- Optimized JVM thread-pool configuration and concurrency patterns, increasing back-end throughput by 35% under peak load conditions.
- Architected and deployed distributed microservices using Java 17, Spring Boot, and Spring Cloud (Eureka, API Gateway), integrating seamlessly with a React/TypeScript front-end to serve 100K+ daily active users.
- Implemented robust security protocols utilizing Spring Security and OAuth2/JWT for centralized authentication and authorization across full-stack applications.
- Optimized data access layers by tuning Hibernate/JPA caching strategies, resolving N+1 query problems, and indexing PostgreSQL databases, which slashed API response times by 30%.
- Leveraged Spring Boot Actuator alongside Micrometer, Prometheus, and Grafana to build comprehensive health-monitoring dashboards, reducing MTTR for production back-end incidents by 40%.
- Managed build and dependency configurations using Maven/Gradle, containerizing full-stack applications via Docker for seamless deployment onto AWS ECS.
- Built robust observability pipelines using Datadog, Splunk, and Prometheus/Grafana dashboards, substantially improving MTTR and on-call effectiveness.
- Conducted rigorous code reviews and refactoring sessions to enforce SOLID principles, scalability, and securecoding standards across the team codebase.
- Mentored 3 junior engineers through pair programming, design discussions, and structured onboarding plans, reducing ramp-up time by 30%.

Software Engineer - Back-End & Full-Stack – **Mphasis** April 2021 – May 2023

- Delivered full-lifecycle features across multiple enterprise Java applications — requirements analysis through production deployment — improving on-time delivery rates across the team.
- Built Spring Boot services and JavaScript front-end components for enterprise client solutions, applying OOP fundamentals and RESTful design patterns to ensure maintainability and reuse.
- Developed Kotlin scripts and automation utilities for internal tooling, improving developer productivity and deployment consistency across environments.
- Developed dynamic, responsive web components using React and JavaScript, mapping them to robust Spring Boot REST controllers using asynchronous processing to handle heavy enterprise data payloads.
- Configured Spring Data JPA to manage complex, transactional enterprise workflows, ensuring ACID compliance across relational databases MySQL.
- Conducted deep-dive JVM performance tuning, analyzing thread dumps and garbage collection (GC) logs to eliminate memory leaks, boosting back-end system throughput by 40%.
- Wrote comprehensive unit and integration test suites using JUnit 5, Mockito, and Spring Boot Test, achieving 85%+ code coverage and ensuring stable deployments via Jenkins CI/CD pipelines.
- Designed and implemented an ML-assisted anomaly detection module using Python/Scikit-learn integrated into Java back-end workflows, proactively surfacing data quality issues.
- Resolved performance bottlenecks through JVM thread analysis and back-end execution flow profiling, increasing system throughput by 40%.
- Collaborated with client-facing teams to gather requirements, translate feedback into actionable technical improvements, and raise client satisfaction scores by 20%.
- Created and maintained CI/CD pipelines (Jenkins, GitHub Actions) for automated build, test, and deployment, improving release reliability.
- Mentored junior developers and interns, providing code reviews and architectural guidance, resulting in a 50% productivity improvement within the team.

Software Engineer Intern — Mphasis Nov 2020 – April 2021

- Built Python-based back-end services following SDLC best practices — requirements, design, development, testing, and deployment — for scalable and secure application workflows.
- Implemented concurrency improvements in real-time processing features using threading optimizations, reducing latency by 15%.
- Wrote unit and integration tests increasing coverage by 25%, enforcing quality gates as part of an Agile CI/CD pipeline.
- Automated database migration and operational scripts, saving 20% of recurring engineering effort.
- Debugged and stabilized Unix-based services, reducing runtime errors by 25%.

KEY PROJECTS & AI/ML HIGHLIGHTS

AI-Powered Document Processing Pipeline

- Designed a RAG-based document assistant using LLM APIs (OpenAI GPT-4) + Spring Boot, enabling naturallanguage querying of insurance policy documents; cut average lookup time by 60%.

Kotlin Multiplatform (KMP) Client SDK

- Developed a shared KMP library with Ktor HTTP client and Coroutines for asynchronous data fetching, deployed to both Android and JVM back-end targets; eliminated ~40% code duplication vs. platform-specific implementations.

Enterprise Java Full-Stack SDLC Dashboard

- Built a responsive full-stack metric tracking system using React for the user interface and Java/Spring Boot for the RESTful API backend. Integrated Spring Data JPA with PostgreSQL to handle transactional data, and used Docker for local microservice orchestration.

Full-Stack SDLC Dashboard

- Built an internal React + Spring Boot SDLC metrics dashboard tracking sprint velocity, defect rates, and deployment frequency, directly informing engineering leadership decisions.

Cloud-Native Java Document Processing Engine

- Engineered a high-throughput backend using Java 17 and Spring Boot to ingest and process large-scale enterprise documentation. Utilized Spring AI/REST clients to interface with LLM APIs, while managing asynchronous task execution via Spring Task Executor to cut processing lookup times by 60%.

EDUCATION

M.S. in Computer Science — Montclair State University, Montclair, NJ 2025

B.S. in Computer Science — St.Martins Engineering College, Hyd,India 2023

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- AWS Certified Developer - Associate (in progress)
- Microsoft Azure Fundamentals (AZ-900)

- Coursera: Machine Learning Specialization (Andrew Ng / DeepLearning.AI)
- Kotlin for Android Developers - JetBrains Academy
